

Computer Networks Model Question Paper

R23 | III Year - I Semester | 3 Hours | 70 Marks

Original Backlog Buddy practice resource - not an official university paper.

PART A - Answer all questions (10 x 2 = 20 marks)

1. List the layers of the OSI model.
2. Define bandwidth-delay product.
3. What is error detection?
4. Define a MAC address.
5. What is subnetting?
6. State the purpose of ARP.
7. Compare TCP and UDP.
8. Define congestion control.
9. What is DNS?
10. Define public-key encryption.

PART B - Answer one question from each unit (5 x 10 = 50 marks)

11. Explain the OSI and TCP/IP reference models.
12. Discuss error detection and data-link protocols.
13. Explain IPv4 addressing, subnetting and routing algorithms.
14. Explain TCP flow and congestion control.
15. Discuss DNS, HTTP, email protocols and network security basics.

Use previous-paper patterns only for preparation; no question is guaranteed.
